COVER LETTER

Dear Hiring Manager,

Firstly let me introduce myself. My name is Sumeru and I just turned 33. Yes, as you can see from my resume or my linked-in, I have been providing software development services to a wide range of businesses for the last 10 years. Although mostly I have worked with mobile apps, I do also have experience with backend and web technologies as well. In addition I have worked as a teacher / coach in two of my assignments.

My career began when I graduated from the University of Florida in Gainesville, Florida, USA and started working at Bloomberg LP in New York City as an Intern. After working for about two years in the United States I moved back to India where I started my own app development company. Soon after I moved to the Netherlands where I have lived for six years and provided software development services to a wide range of businesses.

If you are looking to hire a senior developer / engineer to help manage your engineering infrastructure reliably and finish tasks within promised deadlines, look no further as I now have built a reputation of delivering exactly those things. Additionally I can also serve as a development teacher / coach for your employees and lead your teams across continents as I can now communicate in a number of languages.

Sincerely,
Sumeru Chatterjee
